

British Science Week 2018

British Science Week (BSW) is an annual event, which lasts ten days and celebrates science and maths amongst other subjects. During the week, people of all ages across the UK are encouraged to organise and take part in engaging activities and events. In 2018, the theme is 'exploration and discovery'. Young people are being encouraged to explore and discover new things around them.

Included in this resource pack are four experiments. Each experiment contains details of what you will need, along with step-by-step instructions on how to carry it out. There are also prompt cards to promote discussion and exploration. The prompt cards are editable for you to add your own questions and discussion points.

Enjoy experimenting!
